Gavin 5.0 out of 5 stars Its handy to have mainly for the torque specs. My complaint

about this one is it isn't focused so much on the 240SX. I use it for torque spec reference though so it is no big issue. The 240sx Factory Service Manual FSM is easy enough to find for free if you know how to use a search engine. But still this Chilton is invaluable to have beside you when your hands are greasy. Nah, not really, LOL It arrived in good condition and price was reasonable. <http://pierreseche.fr/userfiles/canon-a1-slr-manual.xml>

This manual was EXACTLY what I needed to complete the repairs. Very thorough instructions and pictures. Saved me hundreds in mechanic repair costs! I was very pleased with the condition of the book. It was exactly as the description stated and was well worth every dollar spent. I would not only buy this book again but I will likely be ordering from the distributor again. Nissan 240sx Factory Service Manuals I've had an original paper copy since 1990 and it's showing its age. Most Nissan FSMs have the complete circuit diagrams engine and main in the foldout, for example the z32 foldout None of the s14 ones do though. Are there complete circuit diagrams engine and main in the paperback fsm. Are there any online. Or are we all stuck piecing together sections from sections in the EL. Thanks for the help! The information is priceless!

Hope to see that hosted soon, it really was a pain to find, took me over a week and dozens of dead links to find a live one. Figure I'd try to give back. The hatchback and convertible body styles were eliminated, leaving only the coupe. The wheelbase of the car grew 2 inches 51 mm and the track width was also increased, while the overall length of the vehicle was slightly shorter than the previous generation. The curb weight of the vehicle decreased by about 80 pounds relative to the 1994 model. Most KA24DEs bound for the US were built in the city of Aguascalientes, Mexico, with the

exceptions of the 240SX, 1994-97 Altima rebadged Bluebird SSS, and the U13 Bluebird released in Australia with FWD configuration, which were manufactured in Yokohama, Kanagawa, Japan. The KA24DE is very similar to the KA24E. The KA24E is SOHC with three valves per cylinder actuated by rocker arms, and the KA24DE is DOHC with 4 valves per cylinder and shim-over-bucket valve actuation. In addition to the increased power and torque, the KA24DE has a higher redline than the KA24E. The head and block are noninterchangeable between all other models and are uniquely cast for frontwheel drive operation. The Mexico blocks all DEs except those found in the S series implemented a distributor and oil pump drive similar to the L series; from the crank nose. They also used a single row chain for the upper timing assembly without a valve cover mounted guide. The crank rides on individually capped bearings with a slightly smaller diameter than the Japanese block, with shorter, slightly lower compression pistons in cylinders that have thicker walls than the Japanese DE. They retained the knock sensor and piston oilers. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with 1993 Nissan 240sx Owners Manual. Originally subcompact in classification, for model year 2000 it was reclassified as a compact car. Until 2006, Sentra was a rebadged export version of the Japanese Nissan Sunny, but since the 2013 model year, Sentra is a rebadged export version of the Nissan Sylphy B17. The Sentra nameplate is not used in Japan. Many other countries in South America sell their versions of the Sunny as the Sentra. In Mexico, the first three generations of the Sentra were known as the Nissan Tsuru Japanese for crane , and the B13 model was sold under that name until 2017, alongside the updated models badged as Sentra. While previous Sentras were subcompacts, the Sentra has grown over the years, with the Nissan Versa having replaced the Sentra in the entrylevel area. The first one was the Nissan Stanza, introduced in the 1981 New York Auto Show as a 1982 model. While previous Sunny models had used a frontengine, rearwheeldrive layout, the B11 Sentra was the first to use a frontengine, frontwheeldrive layout. This featured semihemispherical combustion chambers, highswirl intake ports and a semidual exhaust manifold to provide strong torque at low and medium rpm ranges. Torque peak was 85 lbft 115 Nm at 3200 rpm.

Transmission options were a fourspeed manual, 5speed manual or a threespeed automatic with lockup torque converter. Standard equipment on all models were fourwheel independent suspension, front disc brakes and rear drums, rack and pinion steering, maintenance free battery, rear ashtray and bucket seats. Deluxe models added halogen headlamps, remotelocking gas filler door, carpeted trunk and rear wiperwasher on the wagon. Deluxe and XE offered tinted glass, trip

odometer, vanity mirror, dual remote mirrors and door trim. Also, the 1.5 L was replaced by a 69 hp 51 kW 1.6 L E16 as the standard engine, available with a five-speed manual or three-speed automatic. A sporty SE option was introduced. The SE was only available in the two-door hatchback model and included alloy wheels, black lower body paint and black out grille. Also, automatic transmission was optional on all Sentras except two-door base sedan, MPG Diesel and SE coupe. The B12 chassis was first produced and marketed in 1985 in most parts of the world; however, it was not offered to the United States until 1986. For the 1987 model, all Sentras came standard with the E16 engine with 69 hp 51 kW excepting the Sport Coupe and four-wheel drive wagon, which came with throttle-body injected E16i engines and a five-speed manual transmission. In 1988, all Sentras had the 70 hp 52 kW E16i, which was offered for this year with throttle body injection TBI. In many parts of the world the E-series soldiered on in the B12 chassis with some getting the multipoint fuel injection E16E engine. Diesel engines were also offered in some models, but were rare and only available in North American 1987 models and in certain other parts of the world. From 1989 to 1990, the only engine choice was the 90 hp 67 kW GA16i, a 12-valve SOHC predecessor of the GA16DE. Transaxles offered were the 4 and 5-speed manuals RN4F31A and RS5F31A, respectively and a 3-speed automatic with torque converter lockup RL3F01A.

This was the start of the model classes which were standard through the 2003 model year not all classes were available every year having the E as the base level economy car, the XE as the next up model, the GXE as the top level for the 4-door sedan, the sporty SE coupe, and the SER Not available in the US market as the top of the line performance model. The SE also had dual mirrors, air conditioning, tachometer, and power door locks and windows in some markets and possibly electronic fuel injection. Even more rare are the four-wheel drive versions of the station wagon, offered as an option in 1987, 1988 and 1989 model years. These models featured an electrically activated singlerange transfer case to drive the independently suspended rear wheels, making the car a selectable four-wheel drive not all-wheel drive vehicle. The Nissan logo on the front grille was relocated from the right hand side to the center. In 1990, electrically retracted front shoulder belts were added, as well as 3-point harnesses for the rear passengers, excluding the center rear passenger. It shared none of the body components with the standard model. It was only available with the E16i or GA16i. All Sport Coupes had dual sway bars, dual remote adjust mirrors, and a tachometer instrument cluster. The SE model added features like air conditioning and rear speakers. All B12 Sentras used the same wiring harness, regardless of options installed on any particular vehicle. Essentially a rebadged Nissan Tsuru II built in Mexico, it was called Sentra Classic to distinguish it from the B13 model released for 1991. They were produced and marketed locally between 1988 and 1991. For 1988 for the 4 door Tsuru II and the Hikari had available the Turbo EGI fuel injected 1.6 L engine in a very rare, sporty version. It was one of the most reliable cars in its time in Mexico, being a great sales success. This generation was also exported to some Central and South American markets such as Peru, Chile and Bolivia.

In mid 1989, the Sentra model line was freshened up and the engines were upgraded to 1.4 LX and 1.6 liter. The 1.6 SGX gained power steering, windows, door locks and side mirrors, a first in its class. The second generation B12 also had a diesel variant which had the 1.7 CD17 engine. The second wagon version known as Nissan California 1.6 SGX also had all power features. It came in the base model, E, XE, SE, and GXE. Four-door models came with front motorized shoulder seat belts. The short-lived three-door hatchback of the B12 Sentra was not replaced in this generation, and the sporting coupe version was replaced by the ovoid Nissan NX. The Value Option Package air conditioning, cruise control, and a stereo system was extended to SE models. All Sentras received interior updates, new front and rear fascias. A driver's airbag was also made standard on the GXE and optional on the rest of the range for 1993. An XE Limited model was added for both the coupe and sedan. XE models got more standard equipment that included air conditioning, cruise control and a stereo cassette player. The XE Limited was dropped for 1994. Setting subcompact speed

records of the time, the Sentra SER came with 140 hp 104.4 kW at 6400 rpm and 132 lbft 179 Nm of torque at 4800 rpm. The Super Saloon had all power features. The SE Saloon came as a Limited edition equipped with fourwheel disc brakes and ABS. Both SE and Super Saloon come standard with the GA16DE. B13s where sold new from 1990 to 1999. The LEC version comes with the standard GA13 carbureted engine as well as the LEC Ps Power Steering model. The JX comes with the GA14 carbureted engine. It is known as the Nissan Tsuru in Mexico, Nissan V16 in Chile, Sentra B13 in Central and South American countries. More recent models have received a Renault built hydraulic clutch and an optional catalytic converter.

Its affordable price, relatively good fuel economy, easy servicing and ease of finding spare parts for it made it popular among local taxi drivers and low income families in Mexico, South America, Central America, and the Caribbean. This generation is also the first generation in Mexico wearing the Sentra name. It is also the first Sentra generation exclusively sold in sedan form, as the coupe was dropped in favour of the Nissan 200SX reintroduction. The revived 200SX also replaced the related Nissan NX. Base and XE come with 13inch steel wheels with hubcaps, GXE prior to 1998 also included 13inch wheels. The only difference between trims is the GXE and up come with rear seat trunk access, rear headrests, a gripassist handle on the passenger side, additional fabric on doors and seats as opposed to vinyl, power windows, locks, mirrors, etc. The GLE, SE, and Special Edition include in some instances leather, rear spoiler and moonroof, and keyless entry packages. All trims except the SE and SER have the GA16DE 1.6 L engine producing 115 hp 86 kW and 108 poundfeet 146 Nm. The SE and SER received the SR20DE 2.0L engine with 140 hp 104 kW. The 200SX SER came with leatherwrapped steering wheel and shift knob and even LimitedSlipDifferential until 1997. The SE sedan came with the same 2.0liter SR20DE engine as the SER. This generation saw the end of assembly in Smyrna, Tennessee. The front grille was changed in 1998 from horizontal bars to a large plastic mesh. In 1998 the GXE was upgraded to include 14inch alloy wheels, the GLE also came with 14inch wheels, and the SE and Special editions along with the 200SX SER came with 15inch alloy rims. Previously, the compact class had been occupied by the Altima, which moved to the midsize class in 2001, and its wheelbase remained unchanged from the previous generation. While earlier Sentras were very similar to their Japanmarket Bseries Nissan Sunny twins, the B15 Sentra diverged greatly from the B15 Sunny Nissan Super Sunny.

Production shifted from Smyrna, Tennessee to Aguascalientes, Mexico, and the Smyrna production line was retooled to build the Nissan Xterra. The new model featured a new interior with higher quality plastics and more comfortable seats. The exterior was also substantially updated and now featured bodyside moldings and clear headlights. The curb weight on the QG18DEEngined Sentra is 2,513 lb 1,140 kg. With the introduction of the B15 in year 2000, Nissan also introduced a CA Clean Air trim only available in California. The CA trim boasts a double walled exhaust, 3 catalytic converters, quick catalyst warm up, and a radiator that has a special coating which actually changes ground level ozone smog into oxygen. In Europe, the Bluebird Sylphy was known as the Nissan Almera N16 and Australia and New Zealand as the Nissan Pulsar N16. The 5speed manual was dropped in 2003 models, which consequently made the only available transmission a 4speed automatic. This trim also featured a sporttuned suspension, leatherwrapped steering wheel, and beige sport seat cloth. Its engine also shared with the SER was the same 2.5liter QR25DE unit originally created for the Nissan Altima and Frontier pickups. This engine produced 175 hp 130 kW at 6000 rpm and 180 lbft 244 Nm of torque at 4000 rpm. It was mated to a sixspeed RS6F51H manual transmission and a helical limited slip differential; which served as the only transmission of choice for the Spec V.A front strut tower brace, firmer springs, revised shock damping, firmer front polyurethane bushings, dualtip muffler, and front stabilizer bars were all standard. A fourwheel antilock braking system which was packaged with frontseat sideimpact air bags was also optional equipment on all 20022006 models. Specific to the 20042006 model years; potential buyers could also purchase a 4 piston Brembo brake caliper upgrade.

Other optional features at the time included a Rockford Fosgate 300watt nine-speaker audio system with an 8-inch 200 mm subwoofer in the trunk, six-disc autochanger, and a power sunroof. Other equipment include sportier-looking headlights with black surrounding the silver reflectors, standard foglights, lowerbody sill extensions and a rear spoiler. Originally, speculation arose surrounding the Spec V designation being a play on the GTR VSpec Skyline name. This speculation has been proven to be true with the introduction of the R35 GTR Spec V in North America. The Spec V designation is due to the fact that for some unknown legal reason Nissan cannot use the VSpec title in the US market. These trims offered the appearance of a standard Sentra coupled with the power of an SER. Exterior features included a rear spoiler, fog lights, SER-style front grille, and 16-inch alloy wheels borrowed from the SER model. Interior features included 320watt six-disc Rockford Fosgate nine-speaker sound system, and a charcoal cloth interior and leather-wrapped wheel borrowed from the SER model. The only available engine was the QG18DE paired with either a four-speed automatic or very limited five-speed manual. ABS was unavailable with this package. The RTune package included all of the former, along with a Nismo header, Nismo cold-air intake, rear Nismo 25mm anti-roll bar, Nismo cams, Nismo lower tie bar, and a Nismo hard bushing kit. Nissan CEO Carlos Ghosn has indicated that he will not attempt to match Toyota and Honda in terms of hybrid models offered for retail sale. This decision has left Nissan without a compact hybrid product to compete with Toyota Prius, the Honda Civic Hybrid, and relaunched Honda Insight. Its revisions included a new, Altima-inspired grille, a revised lower fascia and slightly different headlights. In back, new taillights though almost identical to previous years and additional chrome trim pieces on the trunk and side moldings highlight the major changes.

New trimlines are offered to balance out the prices. Fog lamps are no longer standard on the 2.0S and SL model and leather seats are now only available as an option rather than standard on the SL model for 2010, which is reflected in the new, lower MSRP. The Brazilian export variant features a flexible fuel engine and retractable side mirrors were adopted from the Nissan Versa. Both are powered by a redesigned 2.5-liter QR25DE engine. Each model also comes standard with a sport grille, lower body side sill extensions, rear spoiler, fog lights, chrome exhaust tip finisher, smoked headlight surround and smoked taillights. Unique interior features include black sport seat cloth with red stitching and SER embroidered logos, sport metallic tone accents, aluminium pedal pads, and twin pod meters with oil pressure and G-sensor displays. Also, the 2007-2012 Sentra SER was the only Sentra in the lineup to not change its front bumper design in 2010. An Audio package, featuring a 340watt Rockford Fosgate 6CD audio system, with eight speakers two subwoofers, four midrange woofers, and two tweeters was also available. Suspension upgrades included a front stabilizer bar 23.0mm and sport-tuned springs. Unique interior features included red front seat belts, leather-wrapped steering wheel with red stitching, and a leather wrapped shift knob. It has a navigation system with leather interior. Usually has an automatic transmission. Among these new parts are the intake and exhaust valves and seals made with new materials, the first piston ring made with anodized steel, more resistant connecting rods, fuel injectors suitable for use in ethanol and double-layer exhaust gas oxygen to increase the moisture resistance of the fuel. The power rose to 141 hp 143 cv both in gasoline and ethanol.

During the 2008 upgrade of the Honda Fit, the CVT system was replaced by a conventional automatic transmission and according to the manufacturer it was not possible to attach the CVT transmission infinite relations to a flex fuel engine. The Sentra name continued to be used in New Zealand for the Pulsar until 1998, just as Almera was used in Europe. After 2002, the Pulsar name was adopted. Some were sold in the Republic of Ireland. This N16 model is called Sentra M1. The Nissan Sentra nameplate returned in October 2013 as B17, marketed as Nissan Super Sentra. The B13 was nicknamed Sentra Genesis, only sold as sedan from 1991 to 1996. After skipping six years, Nissan reintroduced the Sentra in Indonesia in 2002. The Sentra was now based on the N16 Pulsar or Nissan Bluebird Sylphy. It is powered by a 1.8-liter QG18 engine matched to a 4-speed automatic

transmission. The Sentra was only offered in luxury Super Saloon trim level, loaded with standard ABS and leather interior. However, it was sold only in small numbers until 2004. The N16 model was known as the Nissan Sentra Exalta available from 2001 to 2003. The early model is similar to the JDM Bluebird Sylphy. Nissan Philippines introduced a model with new headlights and tail lights, that was later renamed back to Sentra. This model was known as the Sunny Neo in Thailand. These N16 Sentras have QG series powerplants and are sold in three variants namely the 1.3L GX QG13DE, GSX QG16DE and the top of the line GS QG16DE. Starting the third quarter of 2010, the Nissan Sentra B16 became available in the Philippines included in the new lineup of automobiles from Nissan Motor Philippines NMPI. It is called the new Nissan Sentra 200 with an MR20 engine available in two variants 6speed manual and Xtronic CVT transmission. April 21, 1982. Retrieved March 26, 2017. Retrieved July 22, 2016. See the ninth article and modifications approved by law number 10.696 from July 2, 2003, increasing the upper limit to 25 percent.
