The vibration emission level given in this information sheet has been measured in accordance with a standardised test given in EN 60745 and may be used to compare one tool with another. However if the tool is used for different applications, with different accessories or poorly maintained, the vibration emission may differ. This may significantly increase the exposure level over the total working period. An estimation of the level of exposure to vibration should also take into account the times when the tool is switched off or when it is running but not actually doing the job. This may significantly reduce the exposure level over the total working period. Identify additional safety measures to protect the operator from the effects of vibration such as maintain the tool and the accessories, keep the hands warm, organisation of work patterns. Please observe the article number on the type plate of your machine. The charging procedure begins as soon as the mains plug of the battery charger is plugged into a socket. During the charging procedure, the 3 LEDs light up one after the other and briefly go out. The Bosch PRIO Cordless multisander is a true allrounder. This is due to its compact dimensions, its practical singlehanded operation and its high sanding performance that goes right into any corner. The Bosch PRIO allows you to sand anywhere thanks to its lithiumion battery and its very small size and weight. Easy to Operate Multi Positioning Softgrip The PRIO multisander has a powerful 7.2volt battery, yet is still compact and weighs only 700 grams it can be guided effortlessly with one hand. The ergonomic design with large Softgrip surface on the handle helps to prevent vibration and, therefore, offers fatiguefree working and causes less vibration. Quick Charging LongLife LithiumIon Battery The selfexplaining battery charge level indicator shows you the charging level of your tool. The PRIO holds its charge even if it has not been used for months at a time. You can place it onto the charging station after every application without having to worry about it regardless of whether the battery is fully charged, half charged or almost flat. Your PRIO will be fully ready to use again in 30 minutes. Easy Changing With the Micro VelcroType Fastening System The PRIO combines the functions of an orbital sander with those of a delta sander. Its sanding plate resembles the sole of a small iron and consists of two parts. The rear part is fixed and the deltashaped sanding plate tip is rotatable if the front corner of the sanding paper is worn down, you can rotate the sanding plate tip together with the sanding paper, or you can simply remove the sanding paper and fix it on again using the micro Velcrotype fastening system.

In both cases, all three corners of the sanding paper are used and worn down equally, which triples the paper's service life. Patented Charging Stand Another brilliant feature that comes with the PRIO is the patented charging stand. This clever 2in1 accessory charges the 7.2 volt tool and also allows you to store its accessories sanding paper and plates. LithiumIon Technology The lithiumion technology means that the tool is always ready to use. The Advantages of LithiumIon Technology Tools with lithiumion technology are ready for use practically all of the time. Regardless of whether the battery is fully charged, partially charged, or flat, you can put it in the charging station without having to worry about selfdischarge or memory effect. Small Tools, Big Progress Simply Remarkable Bosch lithiumion cordless tools like the PSB 14 LI2 are ready for use quickly. Even after a period of 4 months on standby, a fully charged lithiumion battery is still charged to approximately 85 per cent. This means that Bosch Power is available to you for six times longer than that of conventional NiCd batteries. Full Power at all Times No selfdischarge, no memory effect constant battery capacity over the entire lifetime. Always ready when you are thanks to lithiumion technology. Same Battery Power at Half the Size Due to the lithiumion technology, the size and weight of the batteries are reduced by approximately 60 per cent compared to conventional nickel cadmium batteries although they offer the same amount of power. Batteries That Can Withstand the Elements The intelligent electronic cell protection, Bosch ECP, protects the lithiumion batteries against excessive temperatures and overload, therefore giving them a particularly long lifetime. High Power, Low Weight Bosch cordless tools with lithiumion technology impress with their very compact design, low weight and very good ease of use. This saves you a lot of effort when doing those DIY jobs.

no need to press hard. The only bad point about it is trying to get it back from the bloke who borrowed it. Mine usually visits about 6 houses before I get it back. So if you buy one, don't tell anyone. Constant use throughout the day charge, use until flat, charge, use until flat, etc. Charge time is about 35 minutes, and the sander lasts an impressive 16 to 18 minutes. Pretty good in my opinion. The sanding sheets are also lasting very well. Only downside is that the vacuum attachment isn't included and the sander only comes with one sanding pad. It is possible to buy different grades of sandpaper which attach effortlessly to the sander, making a small job, very quick and easy but with a quality finish. Just what I bought it for.
