It includes information required for field troubleshooting and repairdisassembly, reassembly, and lubricationso that service personnel will be able to understand equipment function, to rapidly repair the equipment and order any necessary spare parts. This product complies with FDA radiation performance standards, 21 CFR Subchapter J. At the 2nd stage, the controller energizes the solenoid so that the paper feed roller no longer rotates and the paper pickup roller starts rotating to pick up paper into the equipment, a sheet at a time. The graph below shows the transition of electrical charge on the surface of the lasersensitive drum through the four processes charging, exposing, developing, and transferring processes. III 5. The ion uniformly charges the surface of the lasersensitive drum to approx. 870V which is kept by the voltage regulator grounding the grid to the frame. 2 Exposing process When the lasersensitive drum holds a positive electrical charge, the laser beam issued from the laser unit scans the drum according to the print image to expose the drum surface for neutralizing. The developer roller attracts the toner particles fed from the toner cartridge by the toner supply roller, and then conveys them to the contact section with the lasersensitive drum On the contact section between the developer roller and drum, the positive toner particles stick to the neutralized spots on the drum according to the principles of attraction and repulsion, transforming a latent image into a toner image. The controller monitors the internal resistance of the heater thermistor to keep the surface temperature of the heater roller constant by turning the halogen heater lamp on and off.http://xn----7sbakn3aoflleitf3m6a.xn--p1ai/userfiles/curtis-youngblood-atg-v3-manual.xml

Further contact with Brother proved fruitless. It was changed AGAIN and worked for a few days. This has been a very frustrating and disappointing experience.The last three have been problematic with the same problem occurring a white vertical line down the pages of faxes sent and on copies made. Cleaning the machine per the manual does not fix the problem. We have also wasted money replacing the drum unit often when likely we did not have to to try to fix the problem. The problem appears to be with the scanner glass and the way the machine is designed it is difficult to clean the scanner glass. We have had this problem repeatedly with 3 machines over the last few years. Latest machine was purchased and having same problem when only 4 months in was the last straw since we cannot fix the problem. Other than that this is was a great machine.You would think that Brother would make it clear that this particular machine is not compatible with Mac Catalina 10.15. After wasting six hours trying to configure installation and drivers, and then three hours waiting on hold with Brother, they simply said that this machine will not work with my iMac Catalina.A major improvement over our last one We fax a ton of stuff and receive a ton of faxes.

It has been operational for a few weeks and is working great. A major improvement over our last one. Handles lots of work, quiet, feeds well.This thing is garbage except for small volume. If you need to fax small documents it is fine. Over 10 pages, it will suck up multiple pages at once. The real problem is that it messes up 2030 pages into your fax so you need to start all over again. Very frustrating.The old machine is still functioning, but is clearly getting ready to retire soon. I was delighted to see that this model is still being made by Brother, and did not hesitate to purchase another. The old machine has printed literally thousands upon thousands very possibly hundreds of thousands of great quality pages, being used everyday in a busy office environment. The quality of print is very consistent. It has also been used extensively as a fax machine, with zero problems. The punishment that this machine can take is quite amazing, and I love the way that it hooks up easily to my PC via USB. I absolutely would not hesitate to recommend this product. Very easily five stars.I work at a college where the faculty can often have a hard time using simple equipment, I think their brains are wired more towards higher level tasks. This fax machine is the first they have not broken in their attempt to use it. The controls are very easy to use and intuitive. Our previous machine used to beep all day for some unknown reason and we were never able to get it to stop. This machine only makes minimal noise when it is actually printing. I also appreciate the fact that the buttons are big and color coded. This makes it much easier for my office to use. The prints are clear and the toner

seems to last a very long time. At this level of use we replace the toner maybe once a year. I would highly recommend this fax machine.It worked fine for about a week, sent less than 10 fax pages. It doesnt fax at all now. It is designed nicely, I liked making copies with it.

Doesnt do any good if it doesnt work at all though. Cant return it as I didnt use it until after Amazons 30 day return policy.Crisp images, just like my five previous Brother products.Sorry, we failed to record your vote. A waste of paper, toner, and drum plus your time to sort out all the extra paper.Large print jobs can sometimes crash it.It also does good quality laser printing and copying. We like the unattended copying extra a lot. To date totally fault free.And one that does scanning too. Of course you can put in a fax modem and fax yourself to achieve a good quality scan.Inexpensive toner. Simple to use and setup.No network connectivity. A little loud.

The MFP was unreliable and sending and receiving fax messages, so I replaced it with this. easy to set up and program speed dial numbers. Easy transaction with Newegg!This one lasted not even 30 days before grinding noises from the front left earned it a trip back to the store.Much to my dismay, this model had the famous Brother gear stripping noises in the front left of the unit. Ive seen this problem before with Brother printers, but usually the cheap desktop models HL2040, etc. I tried everything I could think of, including filling the paper tray half full, replacing the toner, the drum, both the toner and drum.nothing. The noise got worse until I finally unplugged the beast and returned it, wasting time and money in the process. We ended up getting the MFC8480DN and are very pleased; the speed is much faster plus it has a network port.Its a fax and copies business, so we really put it to hard work.
